Carbon Fiber Spreader Bars For 1963 – 1982 Corvettes

Announcing carbon fiber suspension spreader bars.

These carbon fiber bars are half the weight of the standard aluminum bar, while being as stiff and strong as steel.

Update your Vette to a more modern look while lessening weight with a stronger component.

Available in complete Spreader Bar in Kit form, or as a replacement center section for existing spreader bars to replace your existing standard aluminum bar with lightweight & modern looking carbon fiber.

These bars will fit Corvettes equipped with SharkBite upper control arms, factory control arms or aftermarket tubular steel control arms. Support your crossmember and gain better handling. With this important accessory it is now possible to stabilize and stiffen the cross member. The C2-C3 cross member is notorious for the flimsy vertical attachment on the cross member where the upper a-arm bolts on. This weak point allows the upright to settle and flex inward, adversely changing the suspension geometry. In addition, the OE front crossmember lower control arm attachment point is a focal point for fatigue and cracking of the mount. With this new kit owners can spread the sagging vertical mounts back to their proper upright position in minutes and dramatically improve & stabilize the suspension geometry. Made in the USA, Three Year Warranty.

Installation takes about ten minutes with normal hand tools. Kits come complete with durable black powder coated left and right fittings, mounting hardware and carbon fiber spreader bar with spherical rod ends. Fits all Small Block equipped Corvettes from 1963-1982.

Part Numbers:

[780-86966](#) Carbon Fiber Spreader Bar Kit - for Stock or Tubular Upper A-Arms

[780-86964](#) Carbon Fiber Spreader Bar Kit - for Shark Bite Aluminum Upper A-Arms
